

ZENITH AUTOMOTIVE HOLDINGS LIMITED CARBON REDUCTION PLAN

Supplier name: Zenith Automotive Holdings Ltd

Publication date: 16th October 2025

Executive Summary

Zenith is the UK's leading independent vehicle leasing and fleet management provider. The Group directly funds 75,514 vehicles and has 166,380 vehicles under management, covering cars, light commercial vehicles (LCVs), heavy goods vehicles (HGVs), and specialist vehicles.

We have reduced our scope 1 and 2 emissions by 15.1% during FY25. This was achieved by successfully transitioning our own Zenith employee company car fleet to 100% battery electric vehicles (BEV), and the closure of three vehicle repair workshops in FY25.

Our scope 3 emissions have increased by 4.7% during FY25 because of our use of sold products emissions.

This is due to the vehicles we sold into the used market during the year having a higher remaining lifecycle mileage compared to the vehicles we sold in FY24.

This carbon reduction plan outlines Zenith's greenhouse gas (GHG) emissions over the past two financial years including a detailed breakdown of how and why these have changed YOY, and what actions we will take to reduce them moving forwards. It also details our science-based targets initiative (SBTi) validated carbon reduction targets including progress against these, alongside information regarding Zenith's climate-related governance structure.

Information regarding the scope of this plan, the methodology of our emissions reporting, and third party assurance of the figures disclosed in this plan can be found at the end of this document.

Our organisation and people

Zenith Group is the UK's leading independent leasing, vehicle outsourcing, and fleet management provider. We have 166,380 vehicles under management, with 75,514 funded directly by Zenith.

We operate from fourteen locations across the UK, including two main offices in Leeds and Altrincham, eleven rental yards, and one HGV workshop.

We have over 1,250 colleagues and our team includes administration staff, professional services roles such as finance, information technology, marketing, customer service representatives, sales professionals, skilled automotive mechanics, technicians, and welders.

Our greenhouse gas (GHG) emissions

Zenith's emissions across our last two financial years, including the % change year-on-year (YOY) can be seen in the table below.

Our financial year runs from 1st April to 31st March each year.

A more detailed explanation of our emissions including each Scope 3 category within our boundary can be found on pages 7-19.

| Category | FY25 (tCO2e) | FY24 (tCO2e) | % change |
|--------------------------------------|--------------|--------------|----------|
| Scope 1 | 1,690.3 | 1,996.6 | -15.3% |
| Scope 2 | | | |
| Market-based | 421.4 | 566.6 | -25.6% |
| Location-based | 617.2 | 721.5 | -14.4% |
| Scope 3 total | 1,132,841.7 | 1,082,238.9 | 4.7% |
| Upstream total | 276,975.4 | 327,764.1 | -15.5% |
| Downstream total | 855,866.3 | 754,474.8 | 13.4% |
| Total GHG emissions (Market-based) | 1,134,953 | 1,084,802 | 4.6% |
| Total GHG emissions (Location-based) | 1,135,149.2 | 1,084,957.0 | 4.6% |

Our commitment to achieving net zero

Zenith is committed to achieving Net Zero across our total value chain scope 1, 2, and 3 greenhouse gas (GHG) emissions by 2050 at the latest.

Our near-term and long-term net zero carbon reduction targets have been validated as aligned with the Paris Agreement by the science-based targets initiative (SBTi). These underpin Zenith's emissions reduction initiatives, with key actions including enabling customers to transition to ZEVs, promoting transparency within the industry, and engaging with industry bodies and peers on automotive legislation and regulation.

We have set ambitious targets to act as an inspiration to our stakeholders to also take action. We are reliant on industry changes such as decarbonisation of vehicle production, the implementation of zero emission HGV technology, and the decarbonisation of the energy grid to ensure that BEV charging emissions are zero emission to achieve its targets. Further information on our targets can be viewed on the SBTi website - https://sciencebasedtargets.org/companies-taking-action.

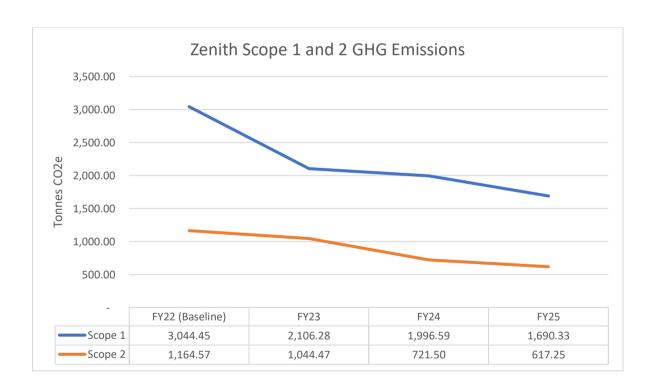

Our carbon reduction target progress

We are on schedule to achieve our scope 1 and 2 targets, both near-term and long-term. This is mainly due to successfully transitioning our own Zenith employee company car fleet to 100% BEV. We are currently behind schedule for our scope 3 targets. Our scope 3 targets are ambitious and we are reliant on wider industry changes to reduce our total GHG emissions. This includes manufacturers' decarbonising vehicle production, the emergence of viable zero emission HGV technology and the decarbonisation of the energy grid to ensure that BEV charging emissions are zero.

| Scope | Timeframe | Target | FY25 Progress versus baseline year |
|------------------|-----------|---|---|
| Scope 1 and 2 | Near-term | To reduce our absolute Scope 1 and 2 GHG emissions 47.5% by 2030 from a FY2022 base year. | 45.2% reduction |
| Scope 1 and 2 | Long-term | To reduce our absolute Scope 1 and Scope 2 emissions by 90% by FY2050 from a FY2022 base year. | |
| Scope 2 | Near-term | To increase active annual sourcing of renewable electricity from 21.2% in FY2022 to 100% in FY2030. | 62% of electricity from renewable sources |
| Scope 3 | Near-term | To reduce scope 3 GHG emissions by 51.6% per funded vehicle by FY2030 from an FY2023 base year. | 4.2% increase |
| Scope 3 | Long-term | To reduce our total Scope 3 emissions 90% by FY2050 from a FY2023 base year. | 2.4% increase |

1. Scope 1 and 2

We have reduced our scope 1 and 2 emissions by 45.2% since FY2022. This is mostly due to two reasons. Firstly, we have successfully transitioned our Zenith employee company car and salary sacrifice scheme to 100% battery electric vehicle (BEV) from internal combustion engine (ICE). This has significantly reduced our transport-related emissions within scope 1. Secondly, we closed three vehicle workshops based in England at Leeds, Skelmersdale, and Aldridge. This has reduced our facilities-related emissions from gas, electricity, and HVAC refrigerant across scope 1 and 2.

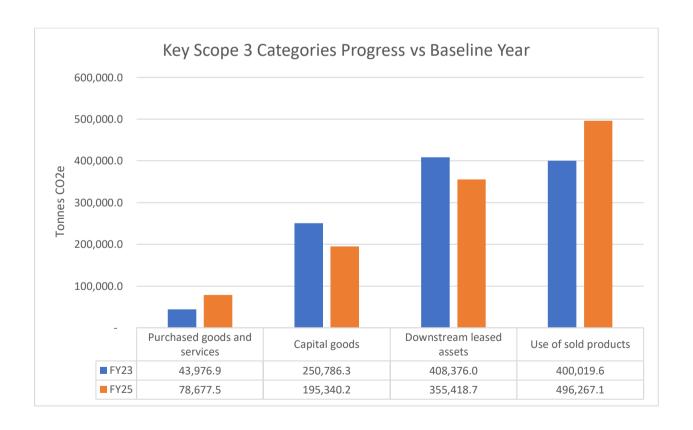

2. Scope 3

Over 99% of Zenith's total scope 3 emissions come from just four categories. These categories follow the lifecycle of the vehicle and our ownership of it. Our progress in reducing these four key categories vs our baseline year emissions can be seen in the infographic below.

Our use of sold products emissions increased by 21% YOY, this was due to there being a higher remaining lifecycle mileage of the vehicles sold in FY25 compared to FY24.

Our downstream leased assets emissions has increased due to the total annual mileage of our funded fleet vehicles increasing by c2million YOY.

Zenith's emissions - A deep dive

A detailed breakdown of our scope 1, 2, and 3 emissions, including each scope 3 category within our boundary, can be seen in the table below.

| Category | What Zenith activity | FY25 | FY24 | % | Key reasons for change | Looking ahead |
|----------|------------------------|---------|---------|---------|-------------------------------|----------------------------|
| | produces these | (tCO2e) | (tCO2e) | Change | | |

| | | | | | | | emissions are zero. |

Carbon Management

At a management level, our Sustainability Manager is responsible for leading the design, delivery, and reporting arms of our management of climate-related risks and opportunities, and our wider sustainability strategy. This includes responsibility for calculating and monitoring of our GHG emissions.

We have a clear environmental governance structure in place with our Executive Committee and CEO being ultimately accountable for climate change and the environment.

They have devolved responsibilities to the ESG Committee and our Sustainability Manager, who leads the design, delivery, and reporting arms of our sustainability plan, including climate change management.

Beneath the ESG Committee sits our Climate Risk Working Group with responsibility for identifying, assessing, and managing climate-related risks and opportunities.

Further information on our ESG and climate-related governance structure and processes can be found within the Task Force for Climate-Related Financial Disclosures (TCFD) section of our 2025 financial year annual report here - https://www.zenith.co.uk/results-policies/annual-report-2025/.

Scope

This carbon reduction plan refers to Zenith Group's total value chain emissions. As such, it applies to the Group companies listed below.

- Zenith Vehicle Contracts Limited
- Provecta Car Plan Limited
- Leasedrive Limited
- ZenAuto Limited
- Contract Vehicles Limited
- Contract Vehicle Fleet Services Limited
- Contract Vehicles Rentals Limited
- Zenith Remarketing Limited

Methodology

Zenith emissions are calculated in line with the greenhouse gas (GHG) protocol standards. We use the the following as a guide to set our organisational boundary and calculate our emissions:

- GHG protocol: A corporate accounting and reporting standard
- GHG protocol: Corporate value chain (Scope 3) Accounting and Reporting Standard

Third-party assurance

Our baseline and current year emissions have been verified by an independent third party, Carbon Footprint.

The verification undertaken by Carbon Footprint Ltd was conducted in accordance with ISO 14064-3 (2019): Greenhouse gases- part 3: 'Greenhouse Gases: Specification with guidance for the verification and validation of greenhouse gas statements'.

This was to a limited level of assurance, as defined by the ISO 14064-3 standard. A verification plan (including sampling) was devised at the preliminary stages of the assessment to guide the verification process.

In conformance with the ISO 14064-3 standard, the following activities were undertaken:

- Initial review of the GHG documentation and methodologies, including historical GHG data for the period 1st April 2024 to 31st March 2025.
- Remote auditing activities, involving discussions with staff from Zenith regarding:
 - o Scope of calculation (including appraisal boundaries).
 - o Input data sets, any missing data, estimations made, and assumptions.
 - o Calculation methodology and conversion factors used.

o Quality control procedures.

Furthermore, our baseline year emissions were analysed by science-based targets initiative (SBTi) as part of our target validation review completed during FY2025.

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard¹ and uses the appropriate Government emission conversion factors for greenhouse gas company reporting².

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard³.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

SIGNED ON BEHALF OF ZENITH AUTOMOTIVE HOLDINGS LTD:

M7 July.

Mark Phillips (CFO) 16th October 2025
